

New Journals from the Resource Centre for December 2011

The Resource Centre is open to the public Monday to Friday 9 am to 5 pm.

For a complete listing of items in our collection, as well as an extensive list of online materials in over 75 languages, please consult our online Resource Centre Catalogue at http://www.alzheimertoronto.org/lib_onlineCatalogue.htm.

NEW JOURNAL ISSUES AVAILABLE

The following journal issues have been published.

Please indicate which articles you would like to view and I will email/fax them to you as appropriate.

Please provide Journal title, issue number, pages & title for each article required.

## JAD: Journal of Alzheimer's Disease

Vol. 27 no 2. November, 2011

Abstracts available online at <http://www.j-alz.com/issues/27/vol27-2.html>

|     |                                                                                                                                                                       |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 243 | Fyn, a Potential Target for Alzheimer's Disease                                                                                                                       |
| 253 | Undetectable Levels of CSF Amyloid- $\beta$ Peptide in a Patient with 17 $\beta$ -Hydroxysteroid Dehydrogenase Deficiency                                             |
| 259 | Plasma Sphingomyelins are Associated with Cognitive Progression in Alzheimer's Disease                                                                                |
| 271 | Vitamin A has Anti-Oligomerization Effects on Amyloid- $\beta$ <i>In Vitro</i>                                                                                        |
| 281 | Alterations of Whole-Brain Cortical Area and Thickness in Mild Cognitive Impairment and Alzheimer's Disease                                                           |
| 291 | Genetic Variation in the Tau Kinases Pathway May Modify the Risk and Age at Onset of Alzheimer's Disease                                                              |
| 299 | Salivary Tau Species are Potential Biomarkers of Alzheimer's Disease                                                                                                  |
| 307 | A Nuclear Function for the Presenilin 1 Neuronal Partner NPRAP/d-Catenin                                                                                              |
| 317 | Effect of Normobaric Hyperoxia on Behavioral Deficits and Neuropathology in Alzheimer's Disease Mouse Model                                                           |
| 327 | Neuroprotective Effects of a Specific Multi-Nutrient Intervention Against A $\beta$ 42-Induced Toxicity in Rats                                                       |
| 341 | Processing of Endogenous A $\beta$ PP in Blood-Brain Barrier Endothelial Cells is Modulated by Liver-X Receptor Agonists and Altered Cellular Cholesterol Homeostasis |
| 361 | Biochemical and Morphological Characterization of the A $\beta$ PP/PS/Tau Triple Transgenic Mouse Model and Its Relevance to Sporadic Alzheimer's Disease             |
| 377 | CSF Tau, A $\beta$ 42, and MHPG Differentiate Dementia with Lewy Bodies from Alzheimer's Disease                                                                      |
| 385 | Increased A $\beta$ PP Processing in Familial Danish Dementia patients                                                                                                |
| 393 | Association of N-Acetylaspartate and Cerebrospinal Fluid A $\beta$ 42 in Dementia                                                                                     |
| 401 | A $\beta$ 1-16 Can Aggregate and Induce the Production of Reactive Oxygen Species, Nitric Oxide, and Inflammatory Cytokines                                           |
| 415 | Task Deactivation Reductions and Atrophy within Parietal Default Mode Regions are Overlapping but Only Weakly Correlated in Mild Cognitive Impairment                 |
| 429 | Gender-Dependent Transthyretin Modulation of Brain Amyloid- $\beta$ Levels: Evidence from a Mouse Model of Alzheimer's Disease                                        |
| 441 | Wild Type and Tangier Disease ABCA1 Mutants Modulate Cellular Amyloid- $\beta$ Production Independent of Cholesterol Efflux Activity                                  |
| 453 | Executive Dysfunction in Mild Cognitive Impairment is Associated with Changes in Frontal and Cingulate White Matter Tracts                                            |
